

Name _____

Continents and Islands

There are seven continents on the planet Earth. Several islands are located near each continent. Use the following clues and a world map and/or atlas to match the continents with their nearby islands. Write a proof statement supporting your conclusions.

Clues

1. The Bahamas, Shetlands, and New Siberian Islands are located north of the tropic of Cancer.
2. The Canary Islands are located at 27 degrees N and 16 degrees W.
3. The Shetland Islands aren't located in the Southern or Western Hemispheres; nor are they located near the two continents immediately west of the international date line.
4. The Ross Islands are located near a continent that is completely south of the tropic of Capricorn.
5. The islands located at 25 degrees N and 78 degrees W are nearest North America.
6. New Guinea is located in the Pacific Ocean between the equator and the 15th Parallel S.

Continents

Islands	North America	South America	Europe	Asia	Africa	Australia	Antarctica
Bahamas							
Falkland							
Canary							
New Guinea							
Shetland							
Ross							
New Siberian
