

# Mystery Island

Author: GREG HANSEN Project Grade

You have been shipwrecked on a deserted island. Your ship has been **totally destroyed** and everyone on board has managed to make it to land. **None** of the animals or supplies from the ship has survived the shipwreck. **Generate a list of essential elements** that you will need in order to survive. **Decide what strategies you will employ in order to survive**, and perhaps be rescued. Your ship was blown off course and few ships pass this island in the normal course of business, therefore you will need long range plans for survival. **Choose a location** which you think would be the best place to locate a permanent settlement. **Be prepared to defend your decisions in front of the class.** From the information contained in the maps, **generate a hypothesis about the island's location.**

- Where will your site of settlement be located? On the sea coast, farther inland or near a good sea port?
- Where is the best place for a signal fire?
- What will be the source of your materials for shelter?
- Where will your source of fresh water be?
- What will be your source of fuel? Where will you get it?
- Where is the best place to grow crops? Why is the region you selected a good place?
- Who should be the leader of the settlement the Captain of the ship, the leader of the settlers or someone elected?
- How will conflicts likely be settled? Will there be laws? If yes, give two examples of laws you would want.
